Render Directions

As a delivery driver, I want to see my order directions drawn on the map so that I can see my route, and the time it will take.

Acceptance Criteria

Given an empty map, when I click on an order, directions to the order's address should be drawn on the map and I should receive basic info like distance and duration.

Given a map with directions already drawn, when I click the same order again, the directions should be cleared. Leaving me with a blank map, and clearing the duration and distance info.

Priority: **1** Points: **8**

Clear Directions

As a delivery driver, I want my route to be removed from the map when I click my name, and then 'out' so that I know I am finished. The next driver can then begin with a blank slate.

Acceptance Criteria

Given a map with my name selected, and my final chosen directions already drawn, when I click the out button, the directions and distance/duration info should be cleared, leaving me with a blank map again.

Priority: **3** Points: **13**

Render "double order" directions

As a delivery driver, I want my route to be able to be made up of up to two different deliveries.

Acceptance Criteria

Given a map with one chosen order's directions being rendered, when I click a second order, directions to the second order should be drawn with the first order as a waypoint.

Given a map with two selected orders already drawn, when I deselect one, the remaining selected order should remain selected and be redrawn along with distance/duration info.
